

1 Q. Has Nalcor determined what it believes is an appropriate rate mitigation target in  
2 cents per kWh for the rate to be charged domestic customers commencing in 2021  
3 (the first year forecast for full in-service of the Muskrat Falls Project)? If yes, how  
4 was such a target developed?

5

6

7 A. No, Nalcor has not; however Nalcor's focus has been on taking and identifying  
8 actions available to the company to create opportunities that could alleviate power  
9 rate increases following the in-service of Muskrat Falls. This work is being carried  
10 out in consultation with the Government of Newfoundland and Labrador with the  
11 goal of identifying a responsible and sustainable rate that is achievable and  
12 consistent with Government policy.

13

14 Please refer to Nalcor's response to PUB-Nalcor-025.
