

1 **Q. Re 2011 AMR Project, Tab 4.3**

2
3 **Can the conventional meters which are being replaced by the AMR meters be re-**
4 **used or re-conditioned?**

5
6 A. Based on Measurement Canada specifications, it is not economical to re-use
7 electromechanical meters. For the 2011 AMR project approximately 40% of the meters to
8 be replaced are electromechanical and will not be re-used.

9
10 The remaining digital meters will be assessed at time of removal to determine the
11 feasibility of re-use based up on physical condition and remaining life as per
12 Measurement Canada specifications.
