

Undertaking 115

Re: Documentation on the storage of the CT Unit for two years from 2007 to 2009

The undertaking is that ... (the storage records start approximately October of 2009. The turbine is a 2007) are there any other records for the period birth, 2007 to October of 2009

Mr. MacIsaac offered to confirm that there was a pause in manufacturing.

Siemens and the original owner (Associated Electric Cooperative, Inc. - AECl) confirmed that the turbine was manufactured in 2007 in anticipation of a purchase order which never materialized. Siemens placed it into storage at their facility in Hamilton, Ontario, Canada, where it was being manufactured. When the order for the combustion turbine generator unit was ultimately placed by AECl in 2009, a generator manufactured at that time was assigned to the AECl order. The turbine and the generator were never installed by AECl and both were placed into controlled storage at the same time in October 2009. Hydro does not have storage records for the turbine between 2007 and 2009 when it was still retained by the original manufacturer.
