**June 14, 2013**

---

**Public Utilities Board Approves a Decrease in Rates for Customers of Newfoundland Power and Certain Customer Classes of Newfoundland and Labrador Hydro**

The Board of Commissioners of Public Utilities today issued Order No. P.U. 23(2013) approving, effective July 1, 2013, an overall average decrease in Newfoundland Power customer rates of 3.1%. This decrease reflects the net impact on customer rates of both a 4.8% increase in rates associated with Newfoundland Power's recent general rate application and a 7.9% decrease in rates as a result of the annual rate stabilization and municipal tax adjustments.

The Board also today issued Order No. P.U. 24(2013) approving, effective July 1, 2013, an overall average decrease of 3.0% in rates for customers of Newfoundland and Labrador Hydro whose rates are based on Newfoundland Power's rates. Rates for Newfoundland and Labrador Hydro's Island Interconnected customers and Isolated Rural customers will decrease but the rates for Labrador Interconnected customers will not be affected.

On May 16, 2013 Newfoundland Power filed an application for approval of a revised Schedule of Rates, Tolls and Charges, effective July 1, 2013, to reflect the findings of the Board in Order No. P.U. 13(2013) issued in relation to Newfoundland Power's general rate application. The approximate average impact on existing rates to Newfoundland Power's customers associated with the general rate application is an increase of 4.8%.

The application also requests approval of the annual rate stabilization and municipal tax adjustments. These adjustments are made on July 1 each year to reflect variations in certain Newfoundland Power costs, the most significant being purchased power costs from Newfoundland and Labrador Hydro. In Order No. P.U. 17(2013), issued May 13, 2013, the Board approved a decrease in the rate Newfoundland and Labrador Hydro charges to Newfoundland Power to reflect a decrease in fuel costs associated with the production of thermal energy at the Holyrood Thermal Generating Station. The approximate average impact on existing rates to Newfoundland Power's customers resulting from this year's Rate Stabilization Adjustment and the Municipal Tax Adjustment is a decrease of 7.9%.

The specific impact of Order No. P.U. 23(2013) and Order No. P.U. 24(2013) on electricity customers' bills will vary depending on the class of service and amount of electricity purchased.

---

For example the estimated average decrease in rates for Newfoundland Power's residential customers is 1.8%. Excluding discounts and taxes, the bill for a Newfoundland Power residential customer using 1,000 kWh will be reduced by \$2.26, while the bill for a customer using 2,000 kWh will be reduced by \$4.52. Additional information on the rates and customer impacts is set out in the attached schedules. Specific rate enquiries should be directed to Newfoundland Power.

Copies of Order Nos. P.U. 13(2013), P.U. 17(2013), P.U. 23(2013) and P.U. 24(2013) can be viewed on the Board's website at [www.pub.nl.ca](http://www.pub.nl.ca).
