

1 Q. Page 8, line 16: Please advise when Hydro expects to complete its review of  
2 Holyrood and its future capability.

3

4

5 A. Determining the capability of the Holyrood Thermal Generating station involves the  
6 on-going evaluation and analysis of new operating experience, maintenance data  
7 and condition assessments. It would also include, if appropriate, re-consideration  
8 of expert consultant information obtained previously. As newer operating  
9 experience, maintenance data and condition assessments become available; the  
10 capability of Holyrood may change.

11

12 Hydro will include information on the capability of Holyrood in its response to the  
13 Board's request for "a full risk assessment in relation to generation supply (capacity  
14 and energy) until the expected North American Grid interconnection, including  
15 alternatives and options available to address the energy supply circumstances in the  
16 interim" ( See Board letter of February 8, 2016 re: Newfoundland and Labrador  
17 Hydro - Request for Energy Supply Report on the Island Interconnected system for  
18 the period 2015 to 2019). Hydro and the Board are currently determining the timing  
19 of this report.
