Newfoundland Labrador Hydro (NLH) Supply and Demand Status Report Filed Tuesday, December 24, 2019

Section 1 Island Interconnected System Supply, Demand & Exports Actual 24 Hour System Performance For Monday, December 23, 2019

Supply Notes For December 23, 2019

1,2

As of 1719 hours, December 14, 2019, Stephenville Gas Turbine available at 25 MW (50 MW).

Section 2

Island Interconnected Supply and Demand Temperature **Island System Daily** Island System Outlook³ Tue, Dec 24, 2019 Seven-Day Forecast (°C) Peak Demand (MW) Adjusted⁷ Morning Evening Forecast 1,396 Available Island System Supply: 2,015 MW Tuesday, December 24, 2019 1.420 NLH Island Generation:4 Wednesday, December 25, 2019 1.390 1.670 MW 1.366 0 -1 NLH Island Power Purchases:⁶ 1,365 1,341 MW Thursday, December 26, 2019 125 -3 0 Other Island Generation: 220 MWFriday, December 27, 2019 -3 -6 1,465 1,440 ML/LIL Imports: MW Saturday, December 28, 2019 -7 1,340 1,317 -2 Current St. John's Temperature & Windchill: -8 Sunday, December 29, 2019 1.325 1,302 7-Day Island Peak Demand Forecast: 1,465 MWMonday, December 30, 2019 1.420 1,396

Supply Notes For December 24, 2019

Notes:

- 1. Generation outages for running and corrective maintenance are included. These are not unusual for power system operations. They generally do not impact customer supply. The power system operators schedule outages to system equipment whenever possible to coincide with periods when customer demands are low and sufficient supply reserves are available. However, from time to time equipment outages are necessary and reserves may be impacted.
- 2. Due to the Island system having no synchronous connections to the larger North American grid, when there is a sudden loss of large generating units there may be a requirement for some customer's load to be interrupted for short periods to bring generation output equal to customer demand. This automatic action of power system protection, referred to as under frequency load shedding (UFLS), is necessary to ensure the integrity and reliability of system equipment. Under frequency events have typically occurred 5 to 8 times per year on the Island Interconnected System and the resultant customer load interruptions are generally less than 30 minutes. With the activation of the Maritime Link frequency controller during the winter of 2018, UFLS events have occurred less frequently.
- 3. As of 0800 Hours.
- 4. Gross output including station service at Holyrood (24.5 MW) and improved NLH hydraulic output due to water levels (35 MW).
- 5. Gross output from all Island sources (including Note 4).
- 6. NLH Island Power Purchases include: CBPP Co-Gen, Nalcor Exploits, Rattle Brook, Star Lake, Wind Generation and capacity assistance (when applicable).
- 7. Adjusted for curtailable load, market activities and the impact of voltage reduction when applicable.

Section 3 Island Peak Demand Information Previous Day Actual Peak and Current Day Forecast Peak Mon, Dec 23, 2019 Actual Island Peak Demand⁸ 8:25 1,500 MW Tue, Dec 24, 2019 Forecast Island Peak Demand 1,420 MW

Notes: 8. Island Demand / LIL / ML Exports (where applicable) is supplied by NLH generation and purchases, plus generation owned and operated by Newfoundland Power and Corner Brook Pulp & Paper (Deer Lake Power, DLP).
