

1 Q. Please provide copies of all studies, reports, and analyses of potential demand
2 management measures prepared internally by Hydro, and externally for Hydro,
3 since January 2005. As part of this response, please provide copies of any studies,
4 reports and analyses where consideration of potential demand management
5 measures was within the scope of a study, report or analysis of a broader issue,
6 such as for example generation planning.

7

8

9 A. Hydro has not had any studies or reports prepared internally or externally where
10 consideration of potential demand management measures was within the scope of
11 the study or report. Hydro's studies, reports, and incentive programs have been
12 focused on energy conservation rather than demand management. The
13 Conservation and Demand Management (CDM) Potential Study, base year 2006,
14 prepared by Marbek Resource Limited is an energy conservation study, which
15 identifies energy conservation measures. Although the study does not identify
16 demand management measures, it does comment on a predicted range of demand
17 impact that the energy efficiency measures may have collectively.

18

19 When Hydro considers the requirement for demand-driven capital works, CDM is
20 considered during the decision making process. Further to Hydro's internal review
21 and the Board's ongoing review, Hydro is heightening its focus on CDM, and in
22 particular, will be carrying out a marginal cost study in the near future to provide
23 economic analysis to guide the ongoing areas of focus with respect to CDM.
