

1 Q. Please provide the cost and customer impact for each option/alternative that Hydro
2 considered in the ESRA Report, including impact to reliability analysis [LOLH, EUE]
3 for 2016/17 through 2019/20.

4
5
6 A. The impacts to reliability for each of the options considered as part of the ESRA
7 Report were included in that report and can be found in section 8.0 of that report.

8
9 The recommendation, offered on page 29 of the Energy Supply Risk Assessment
10 Report, stated:

11
12 *“Following the analysis, Hydro recommends the advancement of*
13 *TL267, as detailed in Section 8.1. Additionally, Hydro recommends*
14 *the securing of additional curtailable load on the Avalon Peninsula.*
15 *The combination of these two alternatives, with the additional*
16 *positive impact of the Holyrood diesels, provides reasonable*
17 *mitigation of the risk for unserved energy through interconnection.”*

18
19 Given that there is no cost impact associated with the advancement of TL267, there
20 is no anticipated financial impact to customers.

21
22 With respect to the securing of additional curtailable load on the Avalon Peninsula,
23 please refer to Hydro’s response to PUB-NLH-597.
