

1 Q. **Reference: Application, Page 7, Lines 22 - 24**

2 Did Hydro consider transmission voltages other than 138 kV? If yes, what advantages did 138 kV
3 construction have over other transmission line voltages? If not, why not?

4

5

6 A. A 138/69 kV interconnection option was studied by Hatch in the “Labrador Interconnection
7 Options Study” that was completed in November of 2020. Details from this analysis are provided
8 in Newfoundland and Labrador Hydro’s response to NP-NLH-004.
