

1 Q. **Reference: Schedule 1 – Long-Term Supply for Southern Labrador – Phase 1**

2 Further to the response to PUB-NLH-014, what are the savings associated with the re-utilization
3 of the existing three genset units upon completion of the new central diesel plant in Port Hope
4 Simpson?

5

6

7 A. Reusing the existing three genset units from Port Hope Simpson would eliminate the need to
8 purchase new gensets, radiators, aftercoolers, switchgear, and exhausts for future genset
9 replacement projects. The savings of reusing these gensets and associated equipment would be
10 the sum of their current day replacement values, which is estimated to be:

- 11 • Unit 2073: \$270,000;
- 12 • Unit 2099: \$350,000; and
- 13 • Unit 2100: \$450,000.
