

1     **Q.     Reference: Project 6: Relocate Section of Line - TL220 (2026 - 2028)**

2             Page 9, Table 6, Project Schedule. Will the section of line constructed in 2027 be placed in  
3             service immediately becoming used and useful in 2027? If not, what is the interest during  
4             construction being charged to this asset during the remainder of 2027 and all of 2028?

5  
6  
7     **A.**     The construction of the section of TL220 proposed for relocation as per Relocate Section of  
8             Line—TL220 (2026–2028) is scheduled to take place over a two-year period, commencing in 2027  
9             with completion in 2028. As such, the portion completed in 2027 will not be placed into service  
10            until the new section of line is constructed in its entirety and interconnected with the existing  
11            line at both ends.

12            Interest during construction (“IDC”) is estimated at \$2,600, \$73,600, and \$175,500 for 2026,  
13            2027, and 2028, respectively. These charges are based on Newfoundland and Labrador Hydro’s  
14            current corporate assumption for IDC and will vary at the time of execution.
