

1 Q. **Reference: PUB-NLH-061**

2 PUB-NLH-061 indicates that, following the loss of a large Industrial customer, Hydro could
3 consider an application for deferral and recovery of lost revenue. Please identify the
4 circumstances in which Hydro would consider seeking such recovery and, for any resulting
5 deferred amount, identify the customer class or classes from which Hydro would propose
6 recovery and the basis for that allocation.

7

8

9 A. Newfoundland and Labrador Hydro (“Hydro”) could consider an application for deferral and
10 recovery of lost revenue if the loss had a material impact on earnings. If this occurred, the
11 proposal for recovery and use of specific allocators would be a separate application and subject
12 to review and approval by the Board of Commissioners of Public Utilities. Consistent with
13 current practice for variations in load and supply costs between test years, Hydro would
14 propose recovery from other customer classes on the Island Interconnected System.
