

1 Q. **Reference: Response to PUB-NLH-064**

2 Provide the basis for the projected purchase price for Hydro’s energy purchases from the Nain
3 Wind Micro-grid project.

4

5

6 A. Newfoundland and Labrador Hydro (“Hydro”) has not included the projected purchase price for
7 energy purchases from the Nain Wind Micro-grid project in the calculations of the 2027 Test
8 Year within this application.¹ Energy requirements associated with fuel and power purchase
9 costs for the isolated systems for the years 2019 to 2027 as well as the 2019 Test Year are
10 included in Hydro’s response to NP-NLH-116 of this proceeding.

¹ In Hydro’s Application for the Interconnection and Integration of the Nunatsiavut Clean Energy Corporation (“NCEC”) Renewable Energy Project filed with the Board on October 2, 2026, Hydro stated it will purchase energy from NCEC at 90% of the cost of fuel to produce equivalent energy at the Nain Diesel Generating Station. This is consistent with other purchase agreements between Hydro and independent renewable power producers in Hydro’s isolated communities. The project is expected to be completed in 2029.
