

1 **Q. Pages 2-5, LED Street Lighting Replacement Project. Newfoundland Power**
2 **states that street light fixtures will be replaced on an ongoing basis throughout**
3 **the year in response to street light trouble calls.**

4 **a) Please confirm that 2026 is the final year of the LED Street Lighting**
5 **Replacement project; and**

6 **b) Please describe how Newfoundland Power is managing this project to**
7 **ensure that all HPS light fixtures will be replaced with LED fixtures and the**
8 **project will be concluded.**
9

10 **A.** a) Yes, 2026 is the final year of the LED Street Lighting Replacement project.

11
12 b) Newfoundland Power has a structured monitoring process for the LED Street
13 Lighting Replacement Project. Progress is tracked monthly to ensure alignment with
14 the annual replacement target of approximately 10,000 HPS streetlight fixtures and
15 the overall objective of full conversion from HPS to LED streetlight fixtures by the
16 end of 2026.

17
18 Newfoundland Power adjusts internal and contract labour resources based on the
19 volume of reported trouble calls for HPS streetlight fixtures. This approach ensures
20 timely response and continued progress toward project milestones.

21
22 As of January 1, 2025, approximately 19,000 HPS streetlight fixtures remained to be
23 replaced. This remaining quantity is consistent with the established annual
24 replacement plan and supports the scheduled completion of the LED Street Lighting
25 Replacement Project in 2026.
